

Table of contents

1	Basic math	13
	Numbers	14
	Numbers in context	15
	Adding (+)	17
	Subtracting (-)	19
	Multiplying (x)	20
	Dividing (÷)	21
	To raise to the power (a^b)	21
	Taking roots ($a^{\frac{1}{b}} = \sqrt[b]{a}$)	22
	Logarithm	24
	Calculating with percentages	27
	Interest calculation	29
	Background material (for those who want to read more)	35
	Exercises on Chapter 1	36
2	Basic concepts in statistics	39
	Average	41
	Median	41
	Mode	42
	Variance	44
	Empirical distribution	45
	Compare with theoretical distribution	47
	Are there any other distributions?	49
	Covariance	50
	Correlation	52
	Correlation and causality	52
	Background material (for those who want to read more)	53
	Exercises on Chapter 2	54
3	Simple probability distribution	57
	Normal distribution	58
	Uniform distribution for discrete observations	60
	Uniform distribution for continuous observations	63
	Poisson distribution	65
	Lognormal distribution	65

TABLE OF CONTENTS

	Binomial distribution	67
	Beta distribution	68
	Hypothesis testing, general	70
	The p value	72
	Pitfalls	74
	Background material (for those who want to read more)	75
	Exercises on Chapter 3	76
4	Two approaches in statistics	81
	Classical statistics	82
	On the road to Bayesian statistics	85
	Bayesian statistical analysis	87
	In legal practice	90
	Background material (for those who want to read more)	91
	Exercises on Chapter 4	92
5	Simple regression model	95
	Extending a line	96
	A trend line	100
	A simple regression model	100
	Step by step	103
	How good is the calculated trend line?	104
	Measure R^2	105
	t value	108
	How much confidence do we have in a prediction?	108
	Background material (for those who want to read more)	110
	Exercises on Chapter 5	111
6	Multiple regression model	115
	Multiple regression model	116
	Differences in salaries between men and women	121
	Are the results robust?	125
	Background material (for those who want to read more)	127
	Exercises on Chapter 6	128
7	Creating and evaluating forecasts	131
	Types of forecasts	132
	The general idea	133
	Conditional and unconditional	135
	Predictability and properties of the data	136
	Case study: predicting increase or decrease in annual bankruptcies	138
	Benchmark	144
	Background material (if you want to read more)	144
	Exercises on Chapter 7	145

8	Learning from forecast errors	147
	Commonly used criteria for evaluation	149
	Sources of unusual prediction errors	153
	Combining predictions	158
	Adjustments by experts	160
	Background material (for those who want to read more)	161
	Exercises on Chapter 8	162
9	Algorithms	165
	K means clustering	168
	Random Forest	171
	Support Vector Regression	173
	Multilayer model	175
	Ridge, Lasso and Elastic Net	176
	(Artificial) Neural Network	177
	Background material (for those who want to read more)	181
	Exercises on Chapter 9	182
	Answers to selected exercises	185
	Examples of multiple-choice questions: test yourself	201
